

# Rotator / Tilt Unit 24Vdc

This versatile tilt / actuator unit is used on all our small electric ROV's for camera positions but also as a latching actuator in our TMS systems.

With feedback potentiometers and adjustable limit switches supplied as standard, these rugged units are the perfect choice for the positioning of industry standard subsea cameras and sensors. The gearing system is overrated to resist damage due to collisions.

They are oil filled and positively compensated, making them suitable for operation at extreme depth and can be supplied with a range of electrical connector types

### **FEATURES**

- 24 Volts DC
- Top Mounting Flange
- Low Backlash
- Position Feedback
- Robust Design
- Adjustable Limit Switches
- Integrated Positive Pressure Compensator
- Can be Inverted

**WEIGHT IN AIR** 

Various Connector options

## Specifications

DEPTH RATING
OUTPUT TORQUE (STANDARD)
NOMINAL SPEED (STANDARD)
NOMINAL CURRENT
VOLTAGE

3000 metres (6000 optional)

15Nm 3.6 RPM 1.25 Amps 24 Vdc 3.45kg

### **SUB-ATLANTIC PART NUMBERS**

• 24 Vdc version (Standard): SA-A-0245-MAS

• Drawing number: 0020-GA
