

ROV Valve Panel

www.innova.no

The ROV panel with valves is a product with different configurations, depending on customer preferences.

Typically it consists of ROV buckets with valves that allow direction control and a hot stab receptacle for hydraulic power input.

Note: We accept no liability for any printing errors or changes in specification.

Key features

- Configurable to customer preferences
- Materials: Stainless steel and plastic, capable of long periods submerged in seawater

The panel can be mounted on a structure or on the manipulator arm of ROV.
